PRODUCT OVERVIEW

OCTEON Fusion-M CNF73xx integrated baseband processors address a growing number of advanced LTE and 3G base station market segments. Typical applications include outdoor micro cells with 200 to 1000 active users, indoor host-neutral base stations / split-RAN deployments and public safety networks. The OCTEON Fusion-M CNF73xx baseband SoCs combine Marvell’s industry-leading network processor technology with an innovative PHY architecture to enable high-performance, multi-mode base stations supporting the latest LTE innovations such as multi-MIMO configurations, LTE-U and LTE-LAA.

As telecommunication operators deploy next-generation networks both the density and the topology of the wireless network must change. The OCTEON Fusion-M CNF73xx processor family is designed to support existing standards as well as adapt to future network enhancements. The CNF73xx features a very flexible PHY subsystem supporting up to 8 transmit and 8 receive antennas across 4 separate 20 MHz channels. The channels may be combined to achieve higher throughput or operated independently for more deployment flexibility. Multi-protocol support allows simultaneous operation of all LTE variants (FDD / TD-LTE / LTE-U / LTE-LAA) and WCDMA. The processor’s ability to support both high user counts and high output power radios across interfaces including CPRI and JESD204B, allows operators to target CNF73xx-enabled basestations for macro network fill-in for higher frequency spectrum or for sparse populations in rural settings.

Marvell provides production-level L1 PHY implementations for both LTE and WCDMA as well as a high-quality LTE L2-L3 stack that is fully integrated and tested with the PHY layer. Third party stacks are supported with appropriate APIs and toolkits.
### KEY FEATURES AND BENEFITS

<table>
<thead>
<tr>
<th>FEATURES</th>
<th>BENEFITS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Innovative PHY subsystem</td>
<td>Single subsystem supports 2G, 3G and LTE-A protocols simultaneously (600DL/300UL)</td>
</tr>
<tr>
<td>Up to 10 OCTEON III 64-bit cores @ 1.2 GHz</td>
<td>Enables 500+ active LTE users, headroom for advanced SON, eICIC and O&amp;M features</td>
</tr>
<tr>
<td>Up to 4 20MHz channels with a total of 8T8R antenna processing (unlinked)</td>
<td>Flexibility to support numerous channel and antenna combinations as deployment conditions require</td>
</tr>
<tr>
<td>HW-enabled crypto processing</td>
<td>Highly secure encryption without burdening CPU cores</td>
</tr>
<tr>
<td>Integrated timing functionality</td>
<td>SW-enabled IEEE1588 and GPS reduces system power and BOM cost</td>
</tr>
<tr>
<td>CPRI, JESD204B, JESD207P, SerDes Lite RF interfaces</td>
<td>Supports all common base station radio options for different deployment scenarios</td>
</tr>
<tr>
<td>Integrated and tested LTE PHY and stack SW provided</td>
<td>Simplifies licensing requirements and reduces time to deployment</td>
</tr>
<tr>
<td>Base station reference design supplied</td>
<td>Defines field-deployable components and board layout, eliminating design errors</td>
</tr>
<tr>
<td>Well-established partner ecosystem</td>
<td>Streamlines application integration and manufacturing processes</td>
</tr>

</table>

### TARGET APPLICATIONS

- **Outdoor Micro Cell**
  - LTE-only or dual mode
  - 500+ active LTE users
  - High output RF power (2W – 20W)
  - Large cell radius

- **Indoor Host-neutral Cell**
  - LTE-only or dual mode
  - 100+ active LTE users per cell
  - May be stand-alone or split-cell architecture

- **Public Safety**
  - LTE-only or dual mode
  - 100 – 200 active LTE users per cell
  - Private secure networks
  - Network-in-a-box (includes embedded EPC)

- **LTE**
  - L1 PHY (binary)
  - Integrated, tested L2-L3 protocol stack (source and binary)

- **3G**
  - L1 PHY (binary)
  - L2-L3 stack available from 3rd party

- **General**
  - Timing management (GPS, IEEE1588)
  - Northbound APIs (for SON, O&M)
  - TR-069 client and TR-196 data model
  - RF calibration and drivers
  - OCTEON SDK

### PROGRAM

Marvell offers a single license for the complete OCTEON Fusion-M CNF73xx outdoor micro cell design which covers the hardware design files, LTE PHY and stack software, and royalty-free distribution rights. Customers are able to modify the supplied hardware design to tailor the base station to specific deployment use cases. Customers may choose to replace the Marvell-supplied LTE stack with a 3rd party stack, via the FAPI interface.

Access to the Marvell LTE split architecture protocol and system-level hardware components are determined on an individual requirement basis.

### ABOUT MARVELL:
Marvell first revolutionized the digital storage industry by moving information at speeds never thought possible. Today, that same breakthrough innovation remains at the heart of the company’s storage, networking and connectivity solutions. With leading intellectual property and deep system-level knowledge, Marvell semiconductor solutions continue to transform the enterprise, cloud, automotive, industrial, and consumer markets. For more information, visit [www.marvell.com](http://www.marvell.com).
