

Security Advisory

ZDI-CAN-10496/10497/10499/10501/10502/10549/10550/10553/10565/10799

Updated: September 2020

CVE-2020-15643 (ZDI-CAN-10549) / CVE-2020-15644 (ZDI-CAN-10550) / CVE-2020-15645 (ZDI-CAN-10553)

Marvell was made aware of the partial fixes from Tenable in September 2020.

Marvell is currently working towards a software release update, which replaces all previous versions of the software and resolves the above-mentioned vulnerabilities.

Marvell encourages customers to contact their Marvell representative for any additional support.

Originally published: July 2020

Marvell was made aware of vulnerabilities in the *Apache Tomcat Server* associated with the QConvergeConsole GUI (QCC GUI) management application. These vulnerabilities were made public by ZDI in April 2020, and are posted here:

<https://www.zerodayinitiative.com/advisories/upcoming/>.

Marvell places the highest priority on addressing security concerns. Once notified, Marvell immediately collaborated with ZDI to resolve the vulnerabilities, then worked with our direct customers to communicate these vulnerabilities and provide a new software release, QCC GUI v5.5.00.73.

This new release replaces all previous versions of the software and resolves the aforementioned vulnerabilities.

Marvell encourages customers to contact their Marvell representative for any additional support.
