All PCIe and Synergy 16GFC and 32GFC adapters listed above support HPE Smart SAN value-add integration features with HPE B-series and C-Series 16/32Gb FC switches and/or directors. These features simplify storage area network (SAN) deployment and orchestration, reduce the time required to diagnose issues and improve overall SAN resiliency and provide for quality of service. Specific features include:

FC-NVMe, FC-NVMe v2, D-Port Diagnostics, Fabric Assigned Port WWN (FA-WWN), FDMI, Read Diagnostic Parameters (RDP), Link Cable Beacons (LCB), Forward Error Correction (FEC), Buffer to Buffer Credits (BB\_CR), Virtual Machine ID (VM-ID), Universal SAN Congestion Mitigation (USCM)

All HPE-branded QLogic Fibre Channel adapters are designed with dual-port isolated ASICs. This ensures internal resources supporting traffic on each physical port are completely isolated from the other physical ports on the adapter, and delivers predictable per-port performance. This design also increases overall reliability and resiliency of the SAN connections.

All PCIe and Synergy 16/32Gb adapters listed above support concurrent FCP (SCSI) and FC-NVMe communications. They also support T10 Protection information (T10-PI) checksum when connected to HPE Alletra, Primera and 3PAR 16/32Gb FC arrays. This improves data integrity by ensuring data is validated end to end in the Fibre Channel SAN.
