

Fibre Channel Coffee Talk Webinars

As the world become more hybrid – from where we work and where our data lives – in the edge or in the cloud - the choice for [I/O connectivity becomes critical to optimize data flow, intelligent infrastructure operation and security](#). While there are lots of technologies available to connect servers and storage together, the most trusted, performant and efficient protocol for connecting servers to shared storage remains Fibre Channel (FC) and NVMe over FC (FC-NVMe). [Click for more information](#)

With over two decades of being the #1 Storage Fabric and tens of millions of ports shipped - Fibre Channel is the only protocol that is purpose-built for connecting servers to shared storage over a storage area network. If you are up to date on all the latest innovations available in Fibre Channel SANs today and how you can leverage that to improve customer satisfaction, [you can stand out against your competitors](#).

[To help you](#) understand all the new features available in Fibre Channel SANs, Cisco® MDS and Marvell® QLogic® are providing a series of educational webinars on Fibre Channel technology, designed specifically for partners and customers.

Join Marvell and Cisco for 1 or all of these 30-minute sessions.

[All webinars in this series are at 8:00 AM Pacific / 11:00 AM Eastern time zones.](#)

Session 1: Aug 10, 2022 – Fibre Channel Today and Tomorrow

Session 2: Sep 14, 2022 – Meeting Customer Expectations with Predictable Performance

Session 3: Oct 5, 2022 – Delivering Secure & Reliable Storage Connectivity

Session 4: Nov 2, 2022 – Providing Simplified Management and Orchestration

Session 5: Dec 7, 2022 – Enabling SAN Visibility and Intelligence

Session 6: Jan 18, 2023 – Future Proof Fibre Channel with NVMe and 64GFC

We hope you can join us.
