**Last Update: 3/15/2022**

**Future-proof I/O**. And you need to be on top of your game to know how to select the right I/O technology for the solutions you are building for your customers.

Marvell's HPE Team of I/O experts will be conducting a series of 20-30 minute "Coffee Talk" sessions on discussing how FastLinQ Ethernet and QLogic Fibre Channel I/O for HPE can differentiate the solutions you are deploying today.

These are short, to the point presentations to enable you to increase your understanding of I/O technology available for HPE Server, Storage, and Networking solutions. Remember, I/O connectivity is required in every server and storage opportunity. Now is your chance to stay ahead of the competition and be a better trusted advisor to your clients. Here's the list of upcoming webinars. Register today!

| Date/Time | Topic | Registration Link |
|---|---|---|
| **Feb 8, 2022 11-11:30AM ET** | **HPE and NVMe over Fabric Update –** This Coffee Talk will discuss the latest updates relating to Marvell and HPE connectivity support for HPE Storage solutions leveraging NVMe over Fabric connectivity. | Register Here |
| **Feb 22, 2022 11-11:30AM ET** | **Storage connectivity for VMware environments –** This Coffee Talk will provide an update on VMware support for next-generation I/O connectivity like FC-NVMe, NVMe/TCP and more. | Register Here |
| **March 15, 2022 11-11:30AM ET** | **Transitioning to Higher Speeds in the SAN** – In this Coffee Talk, we will discuss the availability of 64GFC and the state of the FC market. Just because there are 64GFC switches and HBAs doesn't mean customers make the jump anytime soon. The Marvell HPE team will discuss the reasons behind this and how you can best help customers make the transition to higher speeds. | Register Here |
| **April 5, 2022 11-11:30AM ET** | **Examining TCO for SANs** – Customers typically choose FC and Ethernet protocols for connecting servers to shared storage. But what are some of the costs considerations that your customers need to be aware of? The Marvell HPE team will explore the TCO of both iSCSI and FC SAN deployments. | Register Here |
| **April 12, 2022 10:30-11AM ET** | **Fibre Channel and Virtual Machine ID** – A Fibre Channel enhancement call Virtual Machine ID or VM-ID enables Server and SAN administrators to track the data flow from the VM to the SAN switch infrastructure. In this Coffee Talk, the Marvell HPE Team will detail how this works and how your customers will benefit from this latest innovation in the FC SAN. | Register Here |
| **April 26, 2022 11-11:30AM ET** | **Adapter Management for VMware and Linux** – In this Coffee Talk, our HPE team will discuss and demonstrate the different options for managing adapters in VMware and Linux environments. | Register Here |
| **May 10, 2022 11-11:30AM ET** | **Adapter Management for Windows Server** – In this Coffee Talk, our HPE team will discuss and demonstrate the different options for managing adapters in Microsoft Windows Server environments. | Register Here |
