

56 Gbaud Quad-Channel, Differential SiPho Mach-Zehnder Modulator Driver

Part No.

IN5624DZ

Product Type

Linear Drivers

Market Segments

Inside Data Centers

Applications400G DR4/FR4
800G DR8/FR8**Features**

- Supports baud rates up to 56 Gbaud
- Differential outputs
- Differential AC-coupled inputs
- High electrical bandwidth
- Adjustable gain
- Low power consumption
- Peak detector per channel
- Excellent THD
- SPI control
- Available in die form

Description

The IN5624DZ is a low power, quad-channel, differential SiPho Mach Zehnder (MZ) modulator driver that is designed to support 400G and 800G PAM4 applications.

The IN5624DZ supports differential input voltages to deliver a differential output swing, while designed to drive flexible output termination loads.

The IN5624DZ includes peak detectors and temperature monitoring circuits. The peak detector output and the temperature monitor reading can be read via the SPI interface.

The IN5624DZ is available in die form.
